

With the rising number of identity crimes each year, keeping your sensitive information safe and secure is more important than ever before.

You could lock up your information inside a safe — but accessing it can become a hassle.

Maybe you choose to store it on your phone — but that's like inviting hackers to steal your info.

What you need is a solution that provides both security and convenience.

Presenting, Online Identity Vault, powered by EZShield®, featuring valuable yet simple tools that empower you to help you secure your identity.

You can store all your personal information with confidence — whether it's your Social Security card, driver's license, credit cards, medical IDs or any of your other important documents.

You can easily snap images of important documents and credentials using our mobile app. The Vault then stores this information — giving you on-the-go access.

You can also protect all of your passwords with EZShield's Password Manager and access them on the go from one convenient location.

All of the information in your Vault is protected by EZShield's Triple Layer Defense™, where customer information is encrypted in three ways to ensure high standards of security.

It's that simple! Just log into your identity theft services account from your computer, smartphone or other device.
